

Octave goes 4 online!

Supported by

The partnership between Molins and TMQS has already resulted in many innovative features on the new Octave cigarette-making machine and, in our continuing development of this machine, we have just added another.

We can now offer, exclusively on the Octave, 4-hole perforation online with the TMQS Multiplex laser unit MPL-400. This feature will perforate up to four lines of holes in the cork paper giving unsurpassed levels of tar and nicotine control.

The unit also offers lower power consumption than the standard pulse laser, higher stability, better control and a neat round hole profile that is almost invisible to the naked eye.

Molins Octave – A new beat.
